QUINDOS Sprocket Wheeels

Measurement and evaluation of sprocket wheels according to DIN 8196 on a coordinate measuring machine.

There is a variety of different types of sprocket wheels. Not all of them are available as options.

Therefore the measuring task must be checked and confirmed by Hexagon Metrology GmbH.

Versions of sprocket wheels that are excluded from this option can be programmed for an additional charge.

This option requires QUINDOS curves (MTW-510-CRV-001).
